```

1/Rong Xu

Walk out from the door near by the Rm100 from CLB

Then go straight until see the bell tower

Then turn right and go straight until see the library

2/Ryan Keener

Leave classroom

Go left

Exit CLB building

Walk towards and past clock tower

Keep going straight until you reach library

3/Dacheng Jiang

Get out of the CLB building from the south-west gate

Turn left

walk alone the road for 100m

turn left

go straight for 100 m

library is on your right.

4/Wenhui Li

Go to the library

Walk out of CLB building

Walk straight until seeing the clock tower

Turn right

Walk straight then you should see the library

a/Which set of the four sequences of steps did you identify as being the best? Why?

According to our discussion, Ryan's answer is the best one. Because his answer includes the details when others didn't consider the specific information.

b/In what ways were the sets of sequences that were produced different?

Someone has more details, and all of us didn't think about the door of exit so that our instructions are different with each other's.

c/In what ways were the sets of sequences that were produced the same?

The result that we want is same, so even if our instructions are different, we still can be guided to the same place.

d/Consider whether your choice of which of these would be the best set of instructions might change depending on the person following them. For example (you may think of other examples), would the best set change if:

- 1) The person following them was already very familiar with campus, or had never set foot on campus.

The instructions would not need as much detail since they are already familiar with the campus.

- 2) The person following the instructions was using a wheelchair, or the person following the instructions was interested in jogging.

The instructions would have to change to accommodate their needs like avoiding the stairs for someone in a wheelchair

- 3) The person was in a rush to get to the library, or the person was a visitor interested in getting the best overall feel of campus while traveling to the library.

The instructions would have to be the shortest route for someone in a rush, but could be a longer route for someone that is trying to see the whole campus.

e/This was a very open-ended question. What questions might you have asked to begin with in order to better know how your sequential steps should have been written?

Whether they knew the campus already or if they needed the quickest route. You would have to ask questions to know what they needed.
